PROJECTS

Petopia: Pawsome Companions — *Frontend & Backend*

Digital pet adoption platform where users can find and adopt virtual pets.

As a crucial member of the development team, I actively contributed to both the front-end and back-end aspects of the project. On the front-end, I designed and implemented various components, ensuring an appealing user interface and smooth interactions. Meanwhile, on the back-end, I played a key role in setting up the server and managing data, ensuring seamless functionality for the application.

Technologies Used: Javascript, React, Tailwind CSS, DaisyUI, Formik, Yup, MongoDB, Mongoose, Atlas, GraghQL, Node.js, Express.js, JWT, Concurrently, Nodemon

Cash Cow Personal Finance Tracker — *Frontend & Backend*

A Web-based platform that enables users to monitor their income, expenses, and budget.

As the lead Full Stack Developer, I successfully designed and developed the user interface with a focus on artistic and front-end aesthetics, utilizing HTML, CSS, and JavaScript, while also implementing backend functionalities using Node.js and MongoDB to ensure seamless data management and user interactions.

Technologies Used: Javascript, CSS, Handlebars.js, Chart.js, MySQL, Sequelize ORM, Node.js, Express.js, Bcrypt

Anime Watchlist — *Frontend & Backend*

Convenient platform for accessing, monitoring, and searching for anime that they may want to add to their personal list.

As the lead developer, my responsibilities included designing the HTML layout with grid, implementing the quotes search functionality using JavaScript, and enhancing the user interface with CSS animations, while ensuring clear documentation, organized codebase, deployment, and presentation preparation.

Technologies Used: Javascript, CSS, HTML
